DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

2. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 is rejected because claim is dependent on claim 1 which does not allow for A to be divalent organic group comprising C=O. The claim has been modified to exclude C=O. Therefore claim 3 does not further limit claim 1.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nolte et al. "Partially sulfonated poly(arylene ether sulfone)- Aversatile proton conducting membrane material for modern energy conversion technologies" in view of Helmer-Metzmann et al. (6,096,856).

Nolte et al. teaches a fuel cell comprising a novel solid proton-conducting ion-exchange membrane, poly(arylene ether sulfone)-based polymer electrolytes shown on page 215 and teaches on page 212, that the fuel cell comprises two current collectors that comprises an electrode/catalyst that is separated by the ion exchange membrane.

Nolte et al. teaches the claimed invention as explained above except teaches that divalent organic group A is $S^{=O}$ instead of -S-.

Helmer-Metzmann et al. teaches that it is known that a polyarylene sulfide-sulfonic acid can contain -S- or $S^{=O}$.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a -S- bond instead of $S^{=O}$ as divalent organic group connector because Helmer-Metzmann et al. teaches that both these divalent organic group connectors can be used in the sulfonated polyarylene solid proton exchange membrane as explained above and one would expect therefore that the membranes would function in a similar way and give similar results.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
